Facing the rough, corrosive environment of pickling lines in the steel industry the acid analyzer **LB3375D-de** is used on-line since more than 15 years for process management of pickling carbon steels and electro plates worldwide (Korea, Australia, USA, Turkey, Russia, Finland, France, China, Netherlands and Germany).

From experience we know: there is no installation like the preceding one.

Direct input of on-site experience into R&D made steady improvements possible. As a consequence there are no real competitors to the LB3375D-de. If the control loop is closed through the analyzer, solely by the reduction of spent acid, cost savings can be achieved which lead to pay back times of the analyzer of less than half a year.

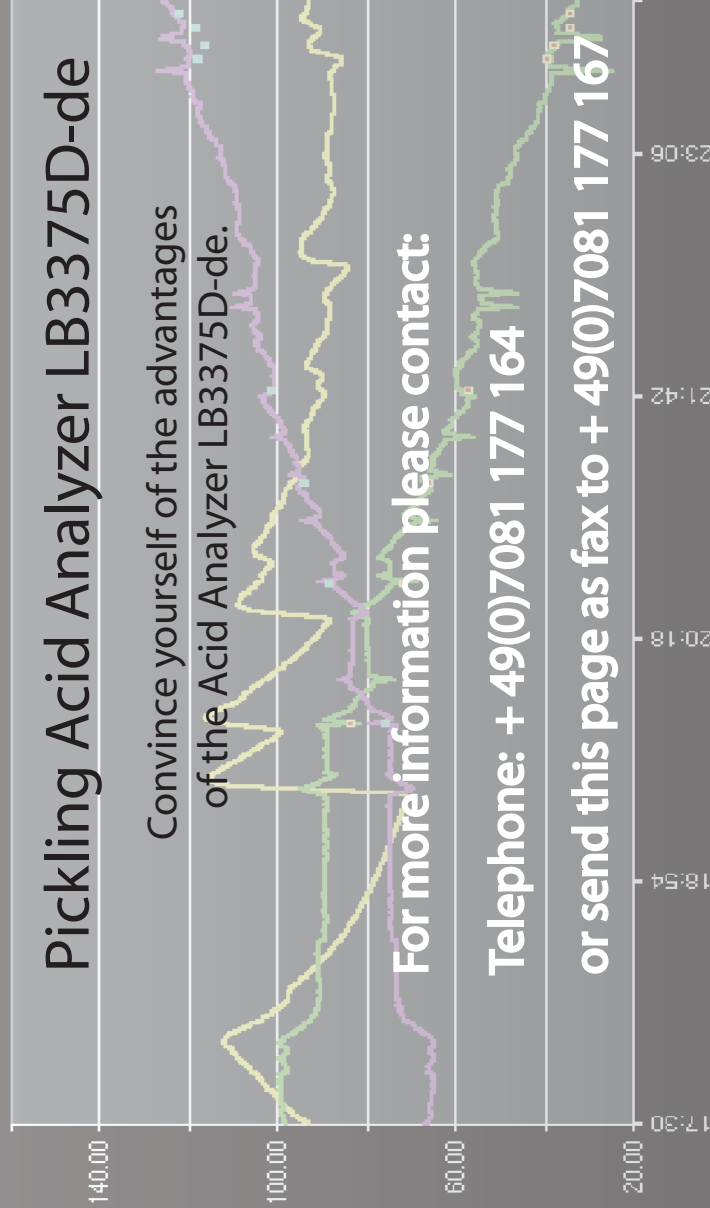

Pickling Acid Analyzer LB3375D-de

Convince yourself of the advantages of the Acid Analyzer LB3375D-de.
